

## ZIMMATIC® TRACKING SOLUTIONS

SUPERIOR TRACTION. BETTER FIELDS. HIGHER YIELDS.

- Superior tracking options reduce downtime
- Reduce or virtually eliminate ruts while improving traction and floatation
- Operate on difficult terrain and soil conditions eliminating idle acres and increasing yields
- Easy to use and install on Zimmatic pivots or other select brands
- Quality products for longer life and less maintenance

**Zimmatic™**  
STRENGTH TO GROW ON

# Stay on Track with Zimmatic

Mud, ruts and other difficult terrain can be trouble spots in your field – making it difficult or impossible to irrigate effectively. Zimmatic® offers a complete line of tracking solutions, including one that will work for you.

## Z-TRAX

For your toughest tracking problems, Z-TRAX will keep your pivot marching on. Steep hills, streams, ruts and mud won't slow down your pivot. Enclosed in a high-ribbed, wide-based tread, Z-TRAX distributes weight evenly to avoid creating ruts while providing improved floatation and lower ground pressure.

With sealed components, Z-TRAX boasts a longer product life and less maintenance than other systems – saving you time and money.

- Quick and easy to install – less than a half hour to complete
- Uses existing hub - no tower modifications needed
- No flat tires to change and less down time
- Can be installed on Zimmatic and other approved brands

## CORNER 4x4

Keep your corner system running smoothly with the Corner 4x4 – a dual-wheel attachment that fits most center pivots. It offers additional floatation to keep water application and movement consistent while lowering your chance of getting stuck in mud, sand or clay.

- Better track management on ruts and ridged crops
- Works with both new or old Zimmatic corner arms, as well as other brands
- Fits any tire size combination currently offered

## THREE-WHEEL TOWER STRUCTURE

Add floatation and increase traction to prevent rutting in marshy areas and other problem soils with the three-wheel tower structure.

Acres that were previously not workable because of stuck machines and downtime from difficult soil can now be irrigated with this solution.

- Lower risk of getting stuck
- Increase tire life
- Reduced drivetrain wear and tear

Before

After

## REDUCED RUTTING AND IMPROVED TRACTION

Wider weight distribution creates better floatation and lower ground pressure which reduces ruts and keeps your irrigation system running smoothly.

*Photos illustrate before and after results using the Corner 4x4 dual-wheel attachments.*

# Automatic Tracking Solutions

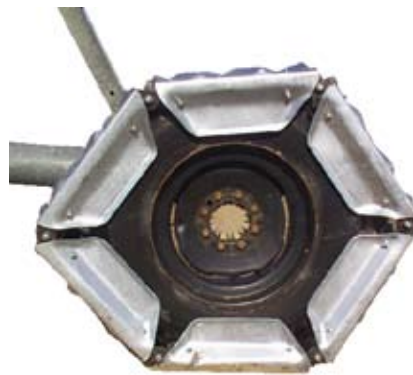

Z-TRAX will handle your toughest tracking problems – while reducing drivetrain and truss structure wear and tear.

## THIRD-WHEEL CONVERSION

Gain all the advantages of a three-wheel tower structure without having to replace your standard, two-wheel drive tube. A simple, economical third-wheel conversion will give your current model added floatation and increased traction when irrigating marshy areas and problem soil. It's a simple change with big benefits.

- Previously unworkable areas can now be irrigated
- Reduces wear and tear on an existing pivot
- Increases tire life

## AGRI-TRAC

Creating more ground surface area than a standard wheel, Agri-TRAC's concave shape and unique rolling action reduces wheel rut depths so pivots won't get stuck in the mud. Tire tread bars mesh with Agri-TRAC tread and will not slip inside the track, even on hills with slippery soil.\*

- Durable design protects tires from rocks and ruts
- Universal fit to any tire size
- An economical choice

## Z-MAT

When water and mud are already in your wheel track, Z-MAT delivers the traction your pivot needs to keep moving. Avoid expensive mid-season track repairs with this inexpensive solution for managing deep and slippery wheel tracks. Simple and easy to use – just cut Z-MAT to fit wheel tracks and lay into the existing path.

- Quick, simple and inexpensive to use on any wheel tracks
- Use on short lengths
- Stabilize existing wheel tracks

\*Some drive train warranties may not support after market add on's. Contact your local Zimmatic dealer for details.

### MAXfield Corner

- Create a custom irrigation program based on your unique field characteristics
- SmartChip Technology remembers your field and adjusts application rates accordingly
- New MAP (MAXfield Application Planner) software allows you and your dealer to test a virtual irrigation system custom made for your field
- Improve the performance of a new or current corner system by adding a Corner 4x4 drive system with four wheels

### GEOLateral Pivoting Lateral

- Maximize your field's production with up to 98% coverage and uniform water application on rectangular fields
- Easy-to-use, economical and reliable hose-fed system with the ability to irrigate multiple crops
- Versatile, dependable pivoting cart available in two options – four-wheel common platform and six-wheel high-traction platform

### FieldVISION

- Easiest to operate
- Unique graphic display provides quick visual status to enhance irrigation management
- Automated area plans save on water, energy and labor
- Accurately adjust water application depths by selecting from a customized list
- History log tracks water usage and pivot performance

### FieldBOSS

- Most powerful, programmable and expandable
- Versatile operation in automated or manual mode
- Step-by-step planning options help you save water, labor and energy
- More memory than most other control panels

### FieldNET™

#### Real-time, Web-based irrigation management

- Networks all of your pivots, no matter what brand – and gives you access and control from any computer or phone
- The user-friendly Web portal lets you configure irrigation requirement and make adjustments quickly and easily
- Precise application of water for maximum efficiency
- Pump control service packages also available

# Gain Efficient Control with Smart Technology

Zimmatic® and GrowSmart™ technology work together to provide the most efficient way to deliver, monitor and control water and chemical application in your fields.
